Get what you want

Bring in your design ideas and Thompson Engineering will work with you to develop a practical and efficient design.

By communicating closely we can also incorporate your business identity throughout your building to grab attention and give street appeal.

Meet your deadlines

Our experienced and efficient team works with determination to meet your construction deadline.

Save time and money throughout your building project

Our practical approach results in cost effective designs and quick turn-around time, while maintaining a professional and high quality finish to your building.

Construct a strong, solid building

We are proud of our high quality craftsmanship.

All buildings are constructed for strength and durability.

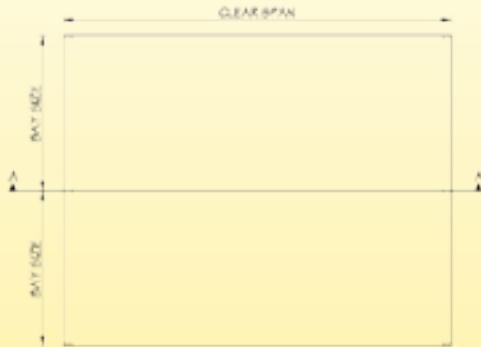

Built with heavy gauge materials to suit large clear spans, and all wind and snow zones.

Thompson Engineering 2002 Ltd
 PO Box 2081, Washdyke
 Timaru

"Thompson Engineering recently completed a 1000m2 'purpose made' shed to house our Frame and Truss fabrication. Critical to us was the time line, but Vaughan, Craig and their team pulled out all the stops to get us into the building right on time. In addition, their experience came to the fore as we progressed with the design, as they made practical suggestions which would ultimately improve our use of the new facility. Congratulations on a job well done!"

Mervyn Evans, Joint Venture Operator - PlaceMakers Timaru & Twizel

"Thompson Engineering completed the Ullrich Aluminium Building in 2007. Their professionalism, integrity and superior workmanship was evident throughout the project. Vaughan, Craig and the team at Thompson Engineering were always approachable with their efficient attitude and expertise solving any issues that arose. We recommend them and their entire crew with full enthusiasm and would insist on using them again".

J.A Allnutt, Manager - Ullrich Aluminium Company Ltd, Timaru
