

Farm Buildings

Protect your farm assets

All buildings designed and manufactured by Thompson Engineering are structurally sound, uniformed and clean. They protect your assets from birds, wind, rain or snow.

Design and build anything you need

Our in-house team of designers can fabricate your hangar to any size you require.

Build your own kitset

You can either do it yourself, use your own contractor or use one of our approved contractors.

Easy handling and freight

Kitsets are manufactured for ease of handling and transporting.

Save on low labour content

Our buildings are designed to require a minimum labour content. With rising labour rates this is a huge advantage to the owner, which keeps the overall building cost down.

Receive valuable help and advice

From the knowledgeable team at Thompson Engineering along with an installation manual for your kitset shed.

Have Thompson Engineering manage your local authority correspondence

By providing a comprehensive set of drawings for the council ensures a hassle-free speedy process through the local governing bodies.

“Timing and attention to detail are two things that spring to mind when dealing with Thompson Engineering. When we looked at building a farm workshop there was only one firm to go with. Thompsons built us a strong quality all steel shed and did the whole job fast and efficiently. My father knew Thompsons were good 30 years ago when they built him a workshop. We are very pleased with our new shed and wouldn’t go anywhere else for another building”.

Chris and Amanda Pannett - Methven

We have used Thompson Engineering a numerous times and have always been more than impressed, so we had no hesitation in calling when we needed another building. Thompson Engineering were excellent to work with and delivered the specifications we agreed, on time, at a quality that looks like it will last forever. Thompson Engineering have always stood behind their buildings, they are very professional in their approach and we would not hesitate to recommend their services”.
