

Hangar

Keep your aircraft safe

All hangars designed and manufactured by Thompson Engineering are structurally sound, uniformed and clean. They protect your assets from birds, wind, rain or snow.

Design and build anything you need

Our in-house team of designers can fabricate your hangar to any size you require.

Build your own kitset hangar

You can either do it yourself, use your own contractor or use one of our approved contractors.

Easy handling and freight

Kitsets are manufactured for ease of handling and transporting.

Save on low labour content

Our buildings are designed to require a minimum labour content. With rising labour rates this is a huge advantage to the owner, which keeps the overall building cost down.

Receive valuable help and advice

From the knowledgeable team at Thompson Engineering along with an installation manual for your kitset shed.

Have Thompson Engineering manage your local authority correspondence

By providing a comprehensive set of drawings for the council ensures a hassle-free speedy process through the local governing bodies.

Timaru

“We approached Thompson Engineering to assist us with the design and construction of a Hangar at Neils Beach in South Westland. A rather remote place compared to normal main-stream New Zealand. The company was recommended to us by a prominent high country station owner and commercial aviation pilot as someone he assured us we could trust in this field of work. Someone who we would enjoy working with and whose expertise and performance was second to none.

The hangar has been built to our complete satisfaction. I now find myself recommending this company to any of my friends and associates who are looking for an engineering firm with such high attributes, as I know they will not be disappointed with the end result and ‘after sales’ service”.

Graeme Murray - Director - Parkbrae Estates Ltd
